Short answer test

1. Data science can analyze student's marks, attendance and performance to predict students who may fail and provide early support.
3. Recommendation systems are used to analyze customer preferences and recommend suitable products.
5. Data science can predict customers who are likely to leave by analyzing their behaviours, helping to reduce customer churn.
7. Data science can analyze past sales data to identify products that sell more during festivals.
9. Data science can analyze soil, weather and crop data to help farmers improve crop yield.
11. This represents velocity, because temperature data is generated and updated continuously.
13. Social media comments are unstructured data, as they are free-form text.
5. The data quality issue is veracity, because the data contains missing and incorrect values.

17. HDFS (Hadoop Distributed File system) is used to store large files in a distributed manner.
19. Apache kafka can collect and process live sensor data from IoT devices.
